

Response paper on 3D Modeling Works

When I need some newly-shaped machines for my own works, I have difficulty making them by myself without drawing tools. For me, who is absolutely bad at free hand-drawing, I thought, it would be much easier if I made it with computers, since I believe that if someone can imagine something clearly, then he or she possibly makes it clearly in the real world.

Toy Kids House, Irvn

Child house cartoon playground toy, Rozen Krantz

Cartoon house 3d model

Everybody dreams of life with these toy-like, a little bit childish things, and I am interested in making life happier without complexity. Whether they are the real houses like these or just small stuffs, it will help me to model these toy-like stuffs freely so that I can actually make machines for my happy-life-related projects.
